

AD Change Pro Quick Start

Version 1.0.1

Before You Install

- Use a supported Windows workstation or server with domain connectivity.
- Confirm LDAPS before Live execution.
- Confirm delegated rights for the attributes, groups, manager updates, and OU moves you plan to apply.

Install And License

- Run the AD Change Pro installer.
- Start AD Change Pro from the Start Menu.
- Use the built in trial or open Settings and import the provided license file.

Initial Setup

- Open Settings and confirm the domain connection status.
- Configure shared template storage if multiple GhostCo tools or workstations will use the same templates.
- Confirm the default UPN suffix and LDAPS settings before staging changes.

Primary Workflow

- Open Change User.
- Find existing users and add them to the queue.
- Assign a template to each queued user.
- Open Review Changes to inspect the staged plan.

Preview And Apply

- Use Preview or Dry Run first to validate the proposed work without modifying Active Directory.
- Use Live mode only after the staged plan is approved.
- Live mode can apply supported attributes, group additions, group removals, manager updates, and OU moves.

Confirm Results

- Review the execution result for each queued user.
- Confirm group membership and OU placement with an independent directory tool when needed.
- Review the activity log for details and troubleshooting context.

If Something Fails

- Check domain connectivity and LDAPS readiness.
- Confirm delegated rights on the user, group, manager, and OU objects involved.
- Confirm Domain Users protection did not block an unsafe group operation.
- Review the activity log in the app.
