

AD Change Pro Requirements

Version 1.0.1

Supported Environment

- Windows 10, Windows 11, or Windows Server on x64 hardware.
- Active Directory domain connectivity to at least one writable domain controller.
- The official installer includes the needed application runtime. No separate .NET runtime install is required.
- No PowerShell module or RSAT feature is required by AD Change Pro.
- RSAT or Active Directory Users and Computers is recommended only for independent verification.

Directory Access And Permissions

- Read access is required for user, group, manager, OU, template preview, and refresh operations.
- Live mode requires delegated rights to write selected user attributes.
- Group additions and removals require delegated rights on the target group objects.
- Manager updates and OU moves require the matching delegated rights.
- LDAPS is required for Live execution.

Licensing And Connectivity

- A thirty day trial is available on first run.
- A valid ADChangePro or FullSuite license enables Live protected actions.
- Runtime license validation is local. Internet access is not required for normal use.
- Installing or replacing a local machine license can require elevated Windows rights.

Storage Summary

- Application settings, exports, and activity logs are stored under the current user profile.
- Shared templates can be stored under ProgramData for suite wide use.
- Back up templates and configuration before upgrades or workstation replacement.

Supported Operations

- Queue existing Active Directory users and assign change templates.
- Preview proposed user attribute, group, manager, and OU changes.
- Run Preview, Dry Run, or Live execution according to operator intent.
- Apply approved group additions and removals in Live mode when delegated rights allow it.

Important Limitations

- AD Change Pro does not bypass Active Directory permissions, domain policy, or object protection.
- Domain Users remains protected during group staging and Live execution.
- Unsupported operations are skipped or reported rather than silently forced.

Preinstallation Checklist

- Confirm domain connectivity from the admin workstation.
- Confirm LDAPS is available before Live execution.
- Confirm delegated rights for attributes, groups, managers, and OU moves that will be used.
- Prepare templates and validate them in a lab before production use.
- Confirm license or trial readiness.
