

AD User Pro Quick Start

Version 2.6.2

Before You Install

- Use a supported Windows workstation or server with domain connectivity.
- Confirm LDAPS availability before protected live account creation.
- Confirm the operator has delegated rights for the target OU, groups, and optional home folder path.

Install And License

- Run the AD User Pro installer.
- Start AD User Pro from the Start Menu.
- Use the built in trial or open Settings and import the provided license file.

Initial Setup

- Open Settings and confirm the domain connection status.
- Configure template storage for the local machine or shared suite template location.
- Review optional home folder defaults only after share and NTFS permissions are ready.

Primary Workflow

- Open Create User.
- Select or create a template with the required attributes, groups, manager, and target OU.
- Enter the user details or import a CSV file.
- Preview the proposed account before creating it.

Safe First Test

- Start with a noncritical test OU.
- Use a test template with a known group and manager.
- Create one test user before bulk CSV work.
- Confirm the created account, attributes, group membership, and activity log entry.

If Something Fails

- Check domain connectivity and LDAPS readiness.
- Confirm delegated rights on the target OU and groups.
- Review the activity log in the app.
- Confirm the license or trial state permits protected creation.
